Phytochemistry

The chief component acids are lauric (19.5%), myristic (46.2%) and palmitic (12.7%), and in the unsaturated portion oleic (6.2%), linoleic (5.4%) and hexadecenoic acid (7.2%).

Applications

1. The refined fat has higher melting points and hence is useful in confectionaries.
2. It exhibits very good skin cleansing as well as moisturizing effect for the skin. Hence, can be used along with other butters to boot the hydration.
3. The high percentage of myristic acid can make it a perfect ingredient for cleansing products.
